| Priyal Vora    |
| Yuxuan Zhou    |

At Ruby and Roses, each product is intricately crafted to bring together a community of artsy and talented individuals. In the hand-dyed yarn industry, the customer base is emotional - they have strong feelings associated with the product and want to connect with the Indie dyer. Along with seasonal yarn, there are themed collections like the Harry Potter collection which was a huge hit.

The scope of this report is to:

- Analyze the competitive landscape and compare using website analytics
- Correlating data across various digital channels
- Conducted RFM Analysis and Market Basket Analysis
- Developed an analytical model through linear regression to predict future fulfilled orders
- The expected incremental benefits from digital promotions

### **Competitor Analysis**

Ruby and Roses has an extensive list of competitors (exhibit A1), all targeting knitting/crocheting enthusiasts offering hand dyed yarn and knitted collections.

Using this list of competitors, we carried out a market level analysis using Semrush:

- Using a word cloud (exhibit A2), we have displayed the top keywords that drive traffic to all the websites in the market. The larger the word, the greater its search volume. We can see that crochet is a heavily searched for word and can be incorporated on the website to drive traffic.
- The domain versus market dynamics tool (exhibit A3) helps us gauge how the Ruby and roses website is performing in contrast with others in the market in terms of traffic share.
- Next, we use a Traffic growth perceptual map (exhibit A4) for the period Sept 21 – Mar 22 (6 months) to place different brands into quadrants based on their traffic volume and growth rate. Sewrella may have the highest volume of visitors on account of being in the market for longer, but if we compare Ruby and Roses growth rate to it, it is way higher which shows there is potential to become a market leader.
- We were also able to get some website analysis metrics from *page speed insights* like Page load speed score (exhibit A5). We see that Google itself breaks down that a poor score is between 0 and 49, an average one between 50 and 89, and a good score is 90+. Sewrella and Tanis Fiber arts have the lowest desktop page load speed which increases bounce rate for visitors. Here are some suggestions to improve this score: <https://www.semrush.com/blog/how-to-improve-your-google-pagespeed-insights-score/>
- Lastly, we used metrics provided by Semrush like Authority score and Backlinks (exhibit A6) to gauge the credibility and trustworthiness of all websites. As Ruby and Roses is new in the market, it has a low authority score and backlinks. These are calculated using machine learning algorithms that consider several factors to produce a rank elaborated on here: <https://www.semrush.com/kb/747-authority-score-backlink-scores>. To improve the number of backlinks, we suggest strategies discussed here <https://www.monsterinsights.com/how-to-get-backlinks/>

Recommendations to improve website:

- Link social media channels to the top of the website like Sewrella.
- Use 'crochet' more often on the landing page to direct more traffic like Sewrella.

- Additional use of CTA (like subscribe function at the top) like 'buy', 'shop', 'order', 'reserve', 'save', 'view'.

## **Facebook Analysis**

### **Overview**

The team set the range from August 1<sup>st</sup>, 2021 – February 28, 2022 – which is the last 6 months, similar to what we had taken for Shopify data. The Number of people who follow the page was 519 and the number of people who like the page was 482. The number of people that saw any content of the page or about the page was the highest for January 18, around when the entire store was at 20% off and Addy had just released brackish mittens **[Exhibit B1]**. Ruby and Roses Yarn's Facebook also had the highest number of Facebook profile page visits around January 18, which explains that the discount on every item in the store helped garner attention from the potential customers **[Exhibit B2]**. According to Facebook Insights, people interested in these top pages and top cities have a higher possibility of interacting with our ads and eventually becoming our customers, hence R&R could try social media marketing based on these interests on a smaller scale to see how these perform **[Exhibit B3]**. Facebook has an extremely low reach as compared to Instagram and R&R has not posted on Facebook for quite a long time. Their post on petite style of basket achieved the highest reach of 292, however, the number is not that significant, and they can be more regular with Facebook posts and their social media marketing strategies can help boost their content. The team also did research on competitors' Facebook accounts, and most of them were not active on Facebook. Moreover, after correlation coefficient analysis between Facebook reach and Shopify checkouts, there is very little connection between those two. As a result, the team recommended that Ruby and Roses Yarn should not invest more time and money on Facebook.

## **Instagram Analysis**

### **Overview**

Until 25 April 2022, Ruby and Roses Yarn got 7,567 followers on Instagram. The most followers are from United States. 97.9% of its followers are women and the most people are from 35-64 **[Exhibit C1]**. The team set the date range from Aug 1, 2021, to Feb 28, 2022. The peak month in which Ruby and Roses Yarn acquired the most Instagram page reach and likes and reactions was in November **[Exhibit C2]**. Ruby and Roses Yarn ran 2 ads from 2020 to 2021. The total spending was \$79.96 and reached 10,357 different users and the ads were shown 12,731 times. The average is that 1 dollar can reach 129 different people and show 159 times **[Exhibit C3]**.

Most views contents mostly include gift, new collections, and sales information **[Exhibit C4]**. The peak reach was on Nov 21, 2021, which reached 8440 people, got 970 visits, and acquired 67 new followers on Instagram. In November 2021, Ruby and Roses launched the Christmas collections and provided 10% off. On Nov 21, 2021, Ruby and Roses announced the winner and set the competition to win giveaway sock set **[Exhibit C5]**. The peak Profile Visits was on Oct 29, 2021, which got 1,164 visits, acquired 24 new followers, but just reached 2,652 people. On that day, Ruby and Roses launched a new sock set called "Castle by Day" **[Exhibit C6]**.

The most active days for Ruby and Roses Yarn are Monday, Wednesday, and Saturday. The most active time for Ruby and Roses Yarn is from 12pm to 6pm **[Exhibit C7]**. This can only be found on the Facebook mobile app.

The significance of correlation coefficient between Instagram and Shopify is positive which means more posts on Instagram can bring more purchases and views for Ruby and Roses Yarn **[Exhibit C8]**.

### **Competitor's Instagram**

Sewrella, Explorer Knits, and Tanis Fiber Art have the highest engagement rate on Instagram. They operated Instagram much earlier than Ruby and Roses and have increasingly loyal customers. The other reason is they run more Instagram A than Ruby and Roses. It is highly recommended Ruby and Roses keep posting regularly and run some Instagram Ads **[Exhibit C9]**.

### **Recommendation:**

Firstly, post more information and photos when a new collection is launched and sales information to get more impression and attention. It is highly recommended that Ruby and Roses post from 12pm to 6pm on Monday, Wednesday, and Saturday, matching the most active time of Ruby and Roses Yarn followers. Secondly, setting more competition and engagement activities on Instagram is important for Roby and Roses to improve the engagement rate and increase the customer lifetime value. Lastly, running more Instagram Ads with the accurate target audience and strategy.

### **YouTube Analysis**

Ruby and Roses Podcast was founded on May 24, 2017, and now has 6,446 followers. It had 41 videos - Knitting Podcasts, VLOGs, and new collection releases - with a total of 250,047 views until April 22nd, 2022. We looked at data from a variety of perspectives, including demographics, geography, videos, and device kind, among others, and produced some recommendations.

- Data and findings (data from 2020.1.9-2022.4.22)

There are four metrics: **views**, **watch time**, **average view duration** and **average percentage viewed**. If a person watches a video for more than 30 seconds, this would be counted as 1 view. From the average percentage viewed we can see if this video can attract viewers and stay. These metrics are directly related to search and recommendation rankings of YouTube videos.

#### **a. Audience demographics**

Gender: From the data **[Exhibit D1]**, we can see that 93.57% of the audience are female, and they make up for 95.6% of the total watch time. Also, females take a significant role in average view duration and average percentage viewed, which means that they pay more attention to the videos and stay longer.

Age: 55–64-year olds are the main audience and have more watch time, and there is another group of 45-54 years olds. The 25-34 years group has the greatest average view duration and average percentage viewed, which means that for each video they watch more than other age groups. **[Exhibit D2]** There are two ways to describe this. One reason is that people in their 40s and 50s are more engaged in knitting, therefore they are more ready to watch and click on these videos. Another factor is that young people aged 25 to 44 are more energetic, which means they are more engaged with these movies.

#### **b. Geography**

As showed in the graph **[Exhibit D3]**, the top 5 views are in the United States, United Kingdom, Canada, Germany, The Republic of Turkey. The audience in Canada and Europe also show great interest in the videos.

c. Videos

Among all the 41 videos on the channel from Jan 9,2020 to April 16,2022 **[Exhibit D4]**, the video “Ruby and Roses Knitting Podcast: Episode 1” which was posted on Jan 9,2020 is the most watched video, and it has 57k views and 1.7k likes. The least watched video is “Ruby and Roses Yarn - VLOGMAS 3” posted on Dec 17,2021 and gets 109 likes. From the chart, views after the first video have dropped significantly, and after then the overall trends are flat. A small peak appears when the video “Ruby and Roses Yarn: How I Knit - Flicking” was posted on June 25,2020.

Length: We analyzed the data of video length and views and found that it shows a low correlation **[Exhibit D5]**. One point that needs to be mentioned is that the video published on June 25, 2020, is only 8 minutes long, but it receives 13594 views which is much more than others.

d. Device

According to the data, the viewers like to use mobile devices to watch videos, such as mobile phones and tablets, and then computers and TV follow **[Exhibit D6]**. When people use mobile devices, they might not keep on watching the videos for as long as one hour.

e. Operating system

From the data of the audience **[Exhibit D7]**, we find that the top 5 operating systems are Android, iOS, Windows, Macintosh, and Roku OS. Android users have much more views than iOS users, however, they have less watch time.

f. Sharing device

People are most likely to share by copying videos to clipboard, and then, text messages and WhatsApp are the second and third top ways to share. After clicking on the “Share” button, people can see the link of this video and a “copy” button on the right, so copy to clipboard is the most used way. Besides this option, on the top there are several buttons of different devices, and people seem to have great interest in sharing to WhatsApp.

g. Subscription status and subscribers' growth

People who have subscribed to the channel have more views than people who have not subscribed, but they have a little less watch time **[Exhibit D8]**. It shows that if people subscribe to the channel, they are more willing to watch the video. And, even if they might not have more watch time, the subscription provides great views and would contribute to the higher search and recommendations.

For subscribers' growth, except the first day this channel posted a video that gained 2,877 new subscribers, the data from Jan 20,2020 to April 16,2022 shows a declining trend of growth rates **[Exhibit D9]**. From the data we find that the audience are willing to subscribe after they watch the Knitting Podcast series, and we noticed that after “Evoking Autumn Collection Launch” was launched, 6 subscribers were lost. Also, the intervals between videos are not regular enough.

- Recommendations

Considering the audience features, the videos are most welcomed by female around 50s, but they do not have exceptional performance on view duration. And then, young audiences are more engaged in videos but now show less interests than elders. Thus, we recommend segmenting the audience and leading them to different styles. On the one hand, the main audience could keep on watching videos they like, and on the other hand, fresh style could attract more young people who would be more engaged in videos and lead to higher search and recommendations ranking of the channel.

People from other countries, especially in Europe, are also interested in the videos, so improving conversion rates of these audience to purchase could help to develop international brands.

Subscription is important for views and other metrics of videos and would influence the quality rankings. Since subscribers are the loyal viewers of the channel and drive more traffic to the videos, we recommend adding certain phrase as “subscribe to my channel” as a way of CTA in the beginning or ending of each video.

Also, as we analyze the videos which lose subscribers, we suggest enhancing the integration of background music and vocals and notice the sound diffusion in the videos.

After combining with the data of Shopify, we find that the posts of YouTube videos have little correlation with actual purchase data. So, if Ruby and Roses could include some details of purchase in the videos or make special series like live streaming e-commerce it may contribute more to the sales.

### **Mailchimp**

|          | Subscribed | Non-subscribed | Unsubscribed | Cleaned | Total |
|----------|------------|----------------|--------------|---------|-------|
| Contacts | 1,831      | 481            | 69           | 54      | 2,381 |

Subscribed: Someone who has opted in to receive your email marketing

Non-subscribed: Someone who has interacted with you but has not opted in to receive email marketing campaigns

Unsubscribed: Someone who previously received your email marketing but has opted out

Cleaned: Has a non-deliverable email address, which might be misspelled or invalid

- Average open rate (measures the percentage rate at which emails are opened): 51.1% v/s industry average of 21.5%
- Average Click rate (measure of how many people clicked on a hyperlink, CTA, or image within a particular email): 12.1% v/s industry average of 7.8%

Audience Change (**Exhibit E.1**) shows the increase or decrease of your audience's total subscriber count, compared to the previous period. In the last year, there has been the highest increase of new customers' subscriptions in July 2021 – 398 subscribers and March 2021 with 312 new subscribers. We have no new subscribers as of February 2022, all 1,831 are existing subscribers, hence R&R has a strong retaining rate, however, it can start acquiring new subscribers through paid advertising.

The table in **Exhibit E.2** shows which email client do the subscribers, who interact with the campaigns, use. It is helpful to know which email programs your subscribers use, because it can help you tailor content and layout. We can see that most of the subscribers use Gmail and iPhone, so we recommend spending extra time tweaking the campaign design and displaying nicely in these inboxes.

According to **Exhibit E.3** and **Exhibit E.4**, the open rate for Welcome Part 2 (copy 02) was the best at 88.24% while the lowest is for Harry Potter Newsletter (copy 01). The open rate helps measure the percentage of recipients who opened the email, which helps gauge the performance of the mail's subject

line and preview. Hence, some work on the subject lines and previews can be done on campaigns with an incredibly low open rate.

Strategies to improve the subject line:

- Write email subject lines that make people curious so that they want to open the mail and learn more
- Using urgency and triggering the fear of missing out (FOMO)
- Asking questions
- Keeping it short, as so many email opens are on mobile devices

Strategies to improve the preview:

- Summarize the email
- Add a call to action. Sometimes this makes people open the email and head straight for the link or button you want them to click

On the contrary, the clickthrough rate (CTR) measures the percentage of recipients who clicked on the links in your email against the total number of subscribers who received the email. Hence, R&R can look at improving their click rate by the following strategies, especially for the last 4 campaigns:

- Include social sharing options
- Segmenting your email lists
- Create a sense of urgency: A tactic that works particularly well for product marketers is putting limits on your offers. This forces readers to redeem them quickly
- Make sure your emails are mobile optimized

#### **Ecommerce:**

According to this feature shown in *Exhibit E.5*, Mailchimp uses the purchase behavior of R&R customers to train a predictive model specific to our store. They then categorize their customer's lifetime value and likelihood to purchase again as low, moderate, or high.

Mailchimp uses the following variables to create a predictive model:

- Customer age  
How long a contact has been a customer, or the amount of time since their first purchase.
- Time between first and last purchase  
The time between a customer's first purchase and their most recent, or last, purchase.
- Time since most recent purchase  
The time since a customer last made a purchase from your store.
- Frequency  
How many times a customer made a purchase.
- Spend amount (CLV only)  
Measures how much money a contact has spent in your connected online store.

R&R could use this information to have targeted offers with loyalty programs and discount offers to customers who have a high customer lifetime value and are likely to purchase again so they are enticed into making a purchase. We can also get these customers' email IDs and remarket the products on Facebook. To acquire similar new customers who would have a high likelihood to purchase again, we can create close lookalikes of them and target them on Facebook.

### **Engagement (Exhibit E.6):**

The highest revenue campaign is the Christmas Advents campaign that generated a revenue of \$3,562.60 with an open rate of 62.4% and a decent click rate of 27.8%

The second highest revenue generating campaign was 'Are you in the mood for a Christmas yarn Sale?' that generated a revenue of \$3,098.40 with an open rate of 50.2% and a click rate of 9.4%. Here, there is potential for improving the click rate and open rate with the strategies and hence, generating more revenue.

### **Shopify Data Analysis**

The e-commerce platform, Shopify, gives detailed data on purchases made by customers, company financial reports, as well as consumer behavior. From our research and data analysis, we were able to dive deeper into the data and understand consumer trends, social media connections, and provide recommendations based on these insights in the categories of sales, sessions, visitors, consumer behavior, and conversion rates.

(Using the timeline of August 1, 2021, until February 28, 2022, in the following analysis.)

### **Sales and Sessions**

December saw the highest number of sales and sessions. On an overall level, year on year comparison says that the sales and sessions from August 1, 2021-February 28, 2022, have increased significantly by 74% and 48% respectively, when compared to the same period from August of 2020 to February of 2021. The sessions for December 2021 are 6,462; whereas the sessions for December 2020 were 3,349, this shows a 93% increase. One insight we gained is the sales and sessions peak during the holiday season due to people shopping for gifts. This is coupled with a sales discount provided through Ruby & Roses. There are trends indicating that there is a higher average order value with fewer total orders. As seen in Exhibit F9, the graphs depict the previous statement.

The United States has the highest number of sessions with 22,398 followed by Canada with 1,515 and the United Kingdom with 1,030 sessions.

Sales from social sources are also a large stream of revenue. As seen in Exhibit F10, Instagram is the largest social media platform seller.

Strategies recommended:

- Boost sessions sales in Canada and United Kingdom by increased marketing or geographic incentives
- Continue to grow Instagram base and encourage sales on that platform
- Offer bundle discounts for orders over a certain value or order size

### **Visitors**

In conjunction with the sales and sessions data, there was also a record number of visitors in the month of December. December saw 6,462 visitors in 2021. As seen in Exhibit F11, we can see the frequency of the orders placed by each customer on Shopify.

Strategies recommended:

- Make sure customers know about the Shopify page via email, website, social media
- Look into paid media to entice new visitors

### Consumer Behavior

The percentage of customers who have placed more than one order in Shopify is 39.58% for the designated time period. As we can see from all previous purchases for each individual customer, the data suggests that our target customers are those who are returning, or more specifically, purchasing in bulk, as opposed to one-time buyers. A recommendation includes tracking returning customers and tracking their purchases in which a reminder email would be sent every 3 months, for example.

Customers are most active on Shopify between the hours of 8:00 am-5:00 pm, with the highest occurring at 3:00pm, of the local time of the customer. Additionally, the highest continued activity on the online store happens on Sunday, followed by Tuesday. Utilizing “ad scheduling” would be beneficial in targeting when customers are most likely to make a purchase.

The top performing products we noted included “Castle by Day” Sock Set, with 203 purchases. This is followed by 124 purchases of “Fresh Linen”, this has seen a 97% increase in purchases, showing that there is strong potential to push this product.

Strategies recommended:

- Track return customers
- Ad Scheduling
- Increase prices
- Create faster availability and shipping where possible
- Promotions on the website
- Free samples with high spend purchases
- Bundled products
- Exclusive Holiday releases

### Conversion Rates

The Shopify average conversion rate is 4.17% for the designated time period, across all countries. This is coupled with the average session duration of all countries at 4:56 minutes. It is worth noting that the countries with high conversion rates also spend the most time at the store, which means there is more intent to purchase, and the number of sessions could be lower because there is not much visibility, hence this is a scaling/optimization point. Such countries are highlighted in green in the table shown in Exhibit F6 in the appendix.

However, countries like the UK and Germany have high number of sessions with lower conversion rates and much lower average session durations which indicate that Ruby and Roses could potentially make changes to the targeting or optimize the landing page. This means that people are being driven to the site, stay for a brief time and then bounce, without converting to a purchasing customer.

The conversion rate is quite strong for iOS Mobile, Mac OS X Desktop and Windows Desktop – this should be scaled. We have specific targeting on paid media where we can uplift specific devices and operating systems and we should make use of that, please refer to Exhibit F7. Google & Bing have the best conversion rates with lower bounce rates, which makes sense since it is pull marketing and the intent there is the highest. The performance on YouTube is impressive with a much higher than average conversion rate – this should be scaled. Lastly, Instagram and Facebook, categorized under push

marketing, have the lowest CVR but are highly effective in spreading awareness. The sales have risen for search channels by 137% in the last 6 months when compared to Aug 2020 – Feb 2021 – this is a clear indication that Ruby and Roses have established good brand awareness which is pulling traffic directly from search engines showing higher intent.

Refer to Exhibit F8.

Strategies recommended:

- Make targeting changes
- Optimize landing pages
- Continue to establish strong brand awareness

### **Machine Learning Analysis**

#### *RFM Analysis*

Recency, frequency, monetary value is a marketing analysis tool used to identify a company's or an organization's best customers by measuring and analyzing spending habits.

An RFM analysis evaluates clients and customers by scoring them in three categories: how recently they've made a purchase, how often they buy, and the size of their purchases.

As seen in Exhibit G1, the number of customers per customer segment is shown. Based off this data, we propose the following:

- Membership programs for Top Customers and Good Customers
- Work on sensitive levers with respect to the average customer
- Remarketing campaigns for customers that have not made a purchase recently
- Advertise similar product offers to customers that recently made a purchase with a discount code
- Provide bundling prices to customers that purchase frequently to increase their monetary value

#### *Market Basket Analysis*

Market basket analysis (Exhibit G4) is a data mining technique used by retailers to increase sales by better understanding customer purchasing patterns. It involves analyzing large data sets, such as purchase history, to reveal product groupings, as well as products that are likely to be purchased together.

Exhibits G2 and G3 show the premise (bolded products) and the conclusion (non-bolded products beneath each premise). Each premise is the product the consumer buys and each conclusion are the next product the same type of customers usually buys.

Exhibit G2 shows the strong lift and confidence of the association rule. Exhibit G3 displays a weak lift and confidence of the association rule.

Important metrics to consider in a Market Basket Analysis:

- Supports: measures how frequently an association rule happens in a dataset. Measuring Support is essential to determine if an association rule is significant in the overall number of purchases. Moreover, we can use Support to decide if it is worth pursuing an association rule or not.

- Confidence: Confidence measures how strong an association rule is. That is to say, in market basket analysis terms, how likely is a second product to be present in the basket if the first is. Measuring confidence is critical to ascertain if a product combination is likely or unlikely to happen. Moreover, by comparing different product combinations' confidences, you can decide which ones to choose to pursue marketing actions.
- Lift: measures the performance of a targeting model (known as an association rule) at predicting a specific outcome, compared with a random choice.

We can use Lift, together with Support and Confidence measures, to determine which association rules between products in a market basket are the strongest. Therefore, we can rank them and prioritize marketing actions around them.

#### *Linear Regression:*

Linear regression is a statistical modeling tool that we can use to predict one variable using another. This is a particularly useful tool for predictive modeling and forecasting, providing excellent insight on present data and predicting data in the future.

In the orders file from Shopify, there were a few orders that were unfulfilled. The reasons could be inventory issues, returns or replacements. We ran a predictive modeling that would help Ruby & Roses understand if any future order that is placed, whether it will be fulfilled or not. They can accordingly take measures to improve consumer experience. This linear regression is a good fit since it has the least square of errors. (Exhibit G5)

There are multiple features of importance that affects the fulfillment status (Exhibit 6):

- Lineitem fulfillment status: whether this product is in the store or not (out of stock or not)
- Taxes
- Refunds
- Total amount
- Shipping cost

#### **Media Plan**

Google Ads can bring Ruby and Roses high search intent customers and can give us higher conversions. The table shown in Exhibit H1, displays some of the keyword ideas that we could utilize if we wish to start advertising on Google Ads. These keywords were pulled out with the help of Google Keyword Planner and Google Trends, after which we used the Forecast tool to predict how much volume and conversions, we can expect to drive out of the paid marketing efforts on Google AdWords platform.

Displayed in Exhibit H2, we see the media plan for the same, which could give us an estimate of 196 conversions.

If Ruby and Roses wishes to increase new customer activation, we recommend social media advertising since push marketing will always improve brand awareness.

| Nicole Hue Loco   | 14.6K          | 155.30%        |

- Game changers: Emerging websites with high growth potential.
- Leaders: Fastest-growing websites attracting a large audience.
- Niche Players: Newbies or small-scale companies with a low growth rate.
- Established Players: Stable players with established popularity.

5. Page load speed score:

| Company            | Mobile | Desktop |
|--------------------|--------|---------|
| Ruby and Roses     | 44     | 75      |
| Sewrella           | 44     | 80      |
| A Homespun House   | 45     | 77      |
| Woolberry Fiber Co | 57     | 87      |
| Tanis Fiber Arts   | 11     | 56      |
| Explorer Knits     | 26     | 79      |
| Voolenvine         | 34     | 89      |
| Nicole Hue Loco    | 41     | 86      |

The speed score is calculated using the metrics below:

6. Semrush metrics:

| Company            | Authority Score | Backlinks |
