

GOOD LIVES

*A Facebook Ad Campaign for a Mental Wellness Platform
— A/B testing destigmatization vs. self-confidence
messaging*

01

The Brief

GoodLives is a one-stop mental wellness platform founded by IIT Kharagpur alumni to make mental health services accessible. As a young brand with limited digital presence in a sensitive category, the campaign goal was narrow and specific: **identify which message style drives more traffic to the website.**

About the Brand

GoodLives serves both individual consumers and corporate wellness programs. Its mission: make mental health treatment accessible for everyone, with stigma reduction and access at the core of the brand promise.

22 - 40

TARGET AGE

37.8%INDIA DEPRESSION RATE
(20-40)**54%**INDIAN INTERNET USERS
20-39

Target Audience

Metropolitan India, 22 – 40, both genders. Interest-based targeting on therapy, healthy habits, quality of life, health & wellness, motivation, self-awareness, self-love, self-esteem, gratitude, and personal development.

02

The Campaign

A two-week Facebook flight (Feb 7 – 17) anchored in a single A/B test. Buying type: Auction. Objective: Traffic. Bidding strategy: Lowest Cost. Daily budget ₹400 per ad set with optimisations as performance dipped. Total spend ₹6,271.19 (~\$84.13).

Course Concept • Maslow's Self-Esteem

Two creatives mapped to Maslow's self-esteem level: **self-enhancement** (positive framing) vs **self-protection** (reduces negative consequences). Hypothesis: an audience already feeling low on self-esteem would respond more strongly to self-protection — the immediate need is relief, not aspiration.

Two Originals — In Market

Ad 1 • Destigmatization: "There is no shame in sharing your problems. We're here to offer a hand to hold. Let's talk."

Ad 2 • Self-Confidence: "You're amazing! Don't let anybody else tell you otherwise. Let's talk."

Both ran with the shared out-of-creative: *Confidential. Secure. Sensitive.*

03

Three New Creatives

Three additional ad concepts to extend the A/B testing program — each anchored in a different psychological angle on the same brand promise: relief, growth, and community.

All three follow the same template as the in-market ads — illustrated visual, single-sentence headline, "Let's Talk" CTA, and the Confidential · Secure · Sensitive trust bar — so they can drop straight into the same A/B framework.

04

The Result

After two weeks, the original destigmatization message generated a **unique CTR of 1.07%**, vs **0.92%** for self-confidence. While the self-confidence ad reached more people in absolute terms, the destigmatization ad converted attention to clicks more efficiently. The hypothesis was validated.

+16.3%

RELATIVE LIFT IN UNIQUE CTR · DESTIGMATIZATION BEAT SELF-CONFIDENCE

“ In mental-health categories, the immediate need is relief from negative feelings — not aspiration to a positive future state. ”

A person seeking mental-health counselling is already experiencing negative emotions. What they want is relief from that pain — the way someone with a headache wants a painkiller, not a wellness vitamin.

05

What's Next

Three priorities for GoodLives' digital marketing, grounded in the experiment outcome.

01 **Anchor Messaging in Destigmatization**

Roll the destigmatization framing across all digital channels — paid social, search, email, and on-site copy. Reducing negative consequences performs better than promising positive ones in mental health.

02 **Scale the A/B Discipline**

Test the three new concepts (Self-Protection, Action, Community) head-to-head against the destigmatization winner. Let creative be the variable; hold audience, placement, and bidding constant.

03 **Place Where the Audience Lives**

Concentrate spend on Instagram Feed and Stories, Facebook Feed, and high-engagement in-article placements. Avoid Audience Network and Messenger Stories.

“ Anchor messaging in destigmatization. Test creative as the variable. Spend where the audience lives. ”
